TLG Beta Code Quick Reference Guide

Revised: July 16, 2009

This document provides a quick reference to Beta Code and its Unicode equivalents. For a comprehensive overview of Beta Code, please see the *TLG Beta Code Manual*.

Unicode equivalents are correct as of Unicode 5.1.

Table of Contents

Notes

Grey Boxes	These indicate deprecated Beta Codepoints. Light shading indicates a deprecated character that is currently in the corpus. Dark shading indicates a deprecated character that is not in the corpus.
Red Text	These indicate codepoints which have been updated since the last edition of the TLG Beta Code Quick Reference Guide.
Green Bold Text	These indicate codepoints which have been proposed for inclusion in the next update to the Unicode Standard. Caution should be used when employing these characters because definitions and codepoints may change.

Key

abbr	abbreviated word that cannot currently be rendered in Unicode. The PUA should be used for these characters.
idiosyn	idiosyncratic characters that do not have Unicode codepoints. The PUA should be used for these characters.
markup	characters with Unicode codepoints but which require additional markup for them to display correctly.
rare	rare characters that do not have Unicode codepoints. The PUA should be used for these characters.
non-TLG	characters reserved for other projects and unused by the TLG. The TLG Project is not in possession of information about the definition or representation of these characters.

Naming Conventions

Where there is a Unicode equivalent for the Beta Code, we have given the Unicode name. Where there is no Unicode equivalent for the Beta Code we have given the TLG's preferred name.

Key

•	indicates official Unicode alternative character names
‣	indicates the TLG's preferred name or alternative TLG names. These are given when the Unicode name is not clear enough to indicate the TLG's use of the character.
→	informational text to help further clarify the use of a character.

Composing and Precomposing Forms

The UTC recommends the use of composing characters for keying polytonic Greek. Wherever possible we use composing characters on our website. However, most browsers do not yet render composing characters adequately. For these browsers we have no option but to use precomposed characters for the time being. The UTC has deemed this an acceptable stop-gap solution. Once a majority of applications can render the composing characters adequately, the precomposed characters will become deprecated.

The Unicode precomposed forms of Greek letters are not listed in this guide. See *TLG Guide to Unicode Precomposed Greek Forms* for a comprehensive overview.

?	0323	̣	Combining Dot Below [9]
.	002E	.	Period

[2] The non-combining forms of the Beta Codes), (, /, + and | are given here for ease of reference only. The Beta Codes themselves map only onto the combining Unicode codepoints.

[3] 'spacing clone of Greek smooth breathing mark' (*Unicode Standard 5.0*, p. 26). 1FBD Greek Koronis and 1FBE Greek Psili are duplicates of this character and should not be used.

[4] 'spacing clone of Greek rough breathing mark' (*Unicode Standard 5.0*, p. 26). 1FFE Greek Dasia is a duplicate of this character and should not be used.

[5] 0384 Greek Tonos and 1FFD Greek Oxia are duplicates of this character and should not be used.

[6] 0342 is the combining diacritic the TLG uses for the Greek Circumflex Accent, it has a different glyph variant range from 0302 Combining Circumflex Accent.. 0302 is the combining diacritic the TLG recommends for use with Latin text.

[7] 1FC0 Greek Perispomeni shares the same glyph range as 0342 Combining Greek Perispomeni and so is to be used as its non-combining clone. 005E Circumflex Accent is the non-combining diacritic the TLG recommends for use with Latin text

[8] 1FEF Greek Varia is a duplicate of this character and should not be used.

[9] The *Unicode Standard* does not currently have a non-combining clone for Combining Dot Below. Currently, 002E Period represents a 'best fit' solution.

[1] The rendering of the Beta Code S into medial and final sigmas depends on its position in the word.

---

[10] "00B7 · is the preferred character" (*Unicode Standard 5.0*, p. 34). 0387 should not be used for 'Greek middle dot (ano teleia)'.

[11] As of Unicode 4.0 "this, and not 037E ; , is the preferred character for 'Greek question mark'" (*Unicode Standard 5.0*, p. 4).

[12] "this is the preferred character to use for apostrophe" (*Unicode Standard 5.0*, p. 167). 0027 should not be used for 'apostrophe', it exists in the Unicode Standard primarily to allow backward compatibility with ASCII.

[13] 2010 is the correct character for 'hyphen'. 002D is ambiguous between 'hyphen' and 'minus' in meaning and should not be used. For 'EN dash', see %19.

[14] Not to be confused with 'hyphen' (-) or 'EN dash' (%19).

---

[15] The Greek and Coptic alphabets are now disunified in the Unicode Standard. Bohairic Coptic letters are now in the Copic block (2C80-2CB1). Coptic letters derived from Demotic are still in the Greek and Coptic block (03E2-03EF). Beta Code has no codepoint for Coptic Capital Letter Sou (2C8A) or Coptic Small Letter Sou (2C8B).

In this document, we are currently using a Coptic font which uses codepoints from the Greek and Coptic block. This will be updated once Coptic fonts become available with the new codepoints. Note also that Coptic scripts rarely distinguish between upper and lower case letters.

[35-]49	non-TLG		Papyrological Brackets
[50]50	non-TLG		Rejected Text of Main Edition → epigraphical

[20] 2329 is the preferred character for Left-Pointing Angle Bracket. 27E8 Mathematical Left Angle Bracket is reserved for mathematical use. 3008 Left Angle Bracket has incorrect spacing for Latin and Greek scripts. Note: online the TLG represents Left-Pointing Angle Bracket with 003C Less-Than Sign. This is because 2329 is not yet included in many fonts.

[21] 232A is the preferred character for Right-Pointing Angle Bracket. 27E9 Mathematical Right Angle Bracket is reserved for mathematical use. 3009 Right Angle Bracket has incorrect spacing for Latin and Greek scripts. Note: online the TLG represents Right-Pointing Angle Bracket with 003E Greater-Than Sign. This is because 232A is not yet included in many fonts.

[22] 2027 Hyphenation Point is preferred over 00B7 Middle Dot to help distinguish between a raised dot as a parenthesis and as a mark of termination in Greek text. Use of 0387 is dispreferred.

[23] There are no Unicode codepoints for the Beta Code Large Square Brackets. 005B and 005D are to be used, but in a larger font size than normal.

[24] There are no Unicode codepoints for the Beta Code Low White Corner Brackets. The doubling of 203A and 203B respectively represents a 'best-fit' solution.

[25] 27EA is the preferred character for Left Double Angle Bracket. 300A Left Double Angle Bracket has incorrect spacing for Latin and Greek scripts.

[26] 27EB is the preferred character for Right Double Angle Bracket. 300B Right Double Angle Bracket has incorrect spacing for Latin and Greek scripts.
